Profile

Data Engineer with a multifaceted skill set encompassing the end-to-end data lifecycle. Experienced with on-premise and AWS cloud architecture, interested in applying knowledge in hybrid architectures. Proficient in developing, integrating, testing, and troubleshooting solutions. Good competencies in DevOps practices such as CI/CD integrations and Linux command-line navigation ensure seamless and efficient operations.

Tech Stack and Certifications

Languages: Python, R, SQL, CSS, HTML5, JavaScript, Bash, Shell, Scala, pgpsql

Technologies: Amazon Redshift, AWS Lambda, S3, QuickSight, Secrets Manager, Step Functions, Event Bridge, AWS IAM, AWS VPC, AWS SNS, AWS (EC2), CloudWatch, dbt Cloud, Spark, Cassandra (NoSQL), Apache Airflow, PostgreSQL, MySQL, MariaDB, Kafka, Docker, Hive, Hadoop, HDFS, Kerberos, Kubernetes, Impala, Docker

Soft skills: Stakeholder Communication, Critical Thinking, Adaptability, Continuous Learning, Collaboration, Proactivity, Self-Motivation

Tools: Git, Github, Postman, Pandas, Scikit-Learn, psychopg2, nltk, gensim, HuggingFace, SQL Alchemy, boto3, Swagger, Kibana, Elastic Stack, CDH, Microsoft VSC, Anaconda

Certifications: AWS Certified AI Practitioner, Global Dev Experts: DevOps certification, Cloudera Technical Professional Accreditation, Database Design and Basic SQL in PostgreSQL

Experience

Q Agency Ltd.

Data Engineer

Apr 2024 – Ongoing

- Full cross-account data pipeline and architecture design and integration, VPC Endpoint configuration for AWS services.
- Permission and security configurations for cross-account communication, role assumption and data exchange through VPC.
- Wrote and maintained clear, detailed documentation to support system architecture, processes, and deployments.
- Configured and managed security permissions for users using IAM and S3 properties and permissions.
- Data quality maintenance and data pipeline optimisation within the internal DWH on AWS, S3, Lambda and Step Functions.
- Created and maintained various reports using Amazon QuickSight, implementing new requests and modifications based on stakeholder requirements.
- Developed new Amazon QuickSight reports in response to stakeholder requests, ensuring data accuracy and usability to support data-driven decision-making.
- Managing QuickSight user base and access permissions.
- Integration and migration of data pipelines with Teamwork, Ganttic and other APIs.
- Active participation in the development of data architecture and design.
- Managed and optimized AWS QuickSight analyses by ensuring data quality, creating on-demand reports, managing datasets, and automating dataset refreshes using AWS Lambda functions and Python.
- Explored the application of LLMs, deep learning, and NLP techniques to enhance internal data products, focusing on feasibility and integration into AWS-based data workflows.
- Engaged in ongoing learning of large language models and deep learning frameworks, aligning technical understanding with potential business use cases.

Multicom d.o.o.

Data Engineer and Data Scientist

Apr 2021 – Apr 2024

- Researched Kubernetes deployment strategies for Cloudera infrastructure to enhance scalability and efficiency.
- Implemented and deployed Docker container management for a machine learning (ML) system.
- Managed Spark jobs and Kafka stream integration
- Set documentation standards and maintained comprehensive, up-to-date technical documentation.
- Performed on-premise architecture maintenance, including Linux service development and Docker container management.
- Prepared, maintained, and developed data pipelines for Cassandra (NoSQL) and API delivery.
- Integrated Apache Kafka for querying and notifications.
- Implemented REST API in R with Kerberos authentication.
- Transitioned data pipelines from Oozie to Airflow, creating and scheduling DAGs.
- Migrated from Data Lake to Data Warehouse, reducing query execution time.
- Implementation of Machine Learning system as a tool for improvement of the educational system.
- Mentored students on graph/neural networks and hybrid infrastructure, fostering collaborative development practices.

Institute of Innovation and Industrial Management (IIM), TU Graz

Product Innovation Project

Nov 2019 – Aug 2020

- Built a reliable OCR pipeline prototype in Python using OpenCV library for high-accuracy serial number extraction in industrial environments.
- Optimized image preprocessing and segmentation techniques to ensure consistent recognition across variable conditions.
- Automated manufacturing data capture, reducing redundancy and improving data accuracy.
- Developed lightweight tracking tools to streamline part traceability and reduce manual input.
- Integrated OCR output into real-time data flows with cross-functional teams, enabling centralized monitoring.

GUEP GmbH

Junior Software Developer

Apr 2019 – Aug 2019

- Maintained and tested AVL device software in Java.
- Focused on front-end development and pre-deployment testing.

Nivago d.o.o.

Frontend Web Developer

Sept 2018 – Apr 2019

- Developed and maintained CMS and CRM systems.
- Promoted version control and streamlined production environments.
- Provided technical support for CRM and CMS platforms.

Education

Faculty of Informatics and Digital Technologies, Rijeka

Croatia

Bachelor's Degree in Informatics

2013 – 2018

Faculty of Informatics and Digital Technologies, Rijeka

Croatia

Master's Degree in Informatics

2018 – 2021

Technische Universität Graz

Austria

Erasmus+ Exchange Program

2019 – 2020
